ABSTRACT OF THE DISCLOSURE

[0082] Embodiments, among others, of the present disclosure provide systems and methods for integrating communications services. Briefly described, in architecture, one embodiment of the system, among others, can be implemented as follows. A first persona is provided. The first persona includes a first communications account for a first communications service and a first identifier. The first identifier also is associated with a first service interface. The first service interface is coupled to a first communications user agent. The first communications user agent provides the first communications service to a user. Accordingly, the first service interface activates the first communications user agent if the user is attempting to access the first communications service via the first communications account. Other systems and methods are provided.
